

a2 m/25
out core 3 is determined by multiplying the difference between the first absorbent core length 81 and the second absorbent core length 83 times the function of the first absorbent core width 85 and the intermediate absorbent core width 89 of the absorbent core 3.

Please amend page, 35, fourth paragraph, to read as follows:

a3 Further, the entire surface area of the chassis 2 is determined by multiplying the first chassis length 71 times the function of the second chassis width 79 and the first chassis width 77; and the entire surface area of the absorbent core 3 is determined by multiplying the first absorbent core length 81 times a function of the first absorbent core width 85, the second absorbent core width 87 and the intermediate absorbent core width 89.

Please amend page 37, last paragraph, to read as follows:

a4 Specifically, where the ratio of the surface area 35 of the back one-half portion 105 of the absorbent core 3 to the corresponding surface area 45 of the back one-half portion 101 of the stretchable chassis 2 is 29%, the chassis has a mean strain of 13.1% at 500g, a mean strain of 27.5% at 1000g, and a mean strain of 37.8% at 1400g. Where the ratio of the surface area 35 of the back one-half portion 105 of the absorbent core 3 to the corresponding surface area 45 of the stretchable back one-half portion 101 of the chassis 2 is 16%, the chassis has a mean strain of 17.0% at 500g, a mean strain of 33.3% at 1000g, and a mean strain of 41.8% at 1400g. Where the ratio of the surface area 35 of the back one-half portion 105 of the absorbent core 3 to the surface area 45 of the stretchable back one-half portion 101 of the chassis 2 is 0%, the chassis has a
